DEPARTMENT OF BOTANY
REPORT ON VISIT TO KUKKARAHALLI LAKE TO STUDY ALGAL
BLOOMS**

A visit to Kukkarahalli Lake on 06th August 2022 was organized by the Department of Botany for II semester students to study algal blooms which is a part of their curriculum prescribed by the University of Mysore.

We visited the lake along with 28 students of II semester in the morning. We assembled near the entrance of the lake by 6'o clock in the morning and took a walk around the lake. The lake was sparsely covered by algal blooms due to heavy rainfall. We assisted the students in identifying algal blooms and explained them about harmful aspects of algal blooms. The lake water where the dense algal blooms were observed was collected for further observation in the laboratory which helps the students to know about the algal communities that are responsible for causing blooms.

Our visit to Kukkarahalli Lake was not only circumscribed to the study of algal blooms we also made observations on different hydrophytes growing in the lake, and different species of higher plants which made us to briefly study the vegetation of Kukkarahalli Lake. Students also collected some hydrophytes like *Pistia*, *Eichhornia*, *Azolla* from the lake to preserve them in the department museum.

Principal
Sarada Vilas College,
Krishnamurthypura

**SARADA VILAS COLLEGE,
KRISHNAMURTHYPURAM, MYSURU
DEPARTMENT OF BOTANY
REPORT ON VISIT TO HASSAN MILK DAIRY**

The Department of Botany had organised a visit to Hassan Milk dairy for first semester students of B.Sc. (B/Z) on 21st December 2022 as a part of their curriculum prescribed by the University of Mysore.

The purpose of the visit to Hassan Milk dairy was to know about the applications of microbes in dairy industry. Hassan dairy is a unit of Karnataka Milk Federation (KMF) which supplies milk and its products in and around Hassan districts. The milk produced in various dairy farms are collected and processed in this unit. The visit to Hassan Milk Dairy helped the students to know about the day to day applications of microorganisms and their role in conversion of milk into its respective dairy products. Hence the students gained the knowledge of utilization of microbes in dairy industry.

REPORT ON VISIT MALABAR BOTANICAL GARDEN**

The Department of Botany had organised a field visit to Malabar botanical garden, Kozhikode, Kerala for V semester students as a part their curriculum prescribed in the syllabus by the University of Mysore. The objective of the visit was to study flora and to collect plant species for the purpose of preserving them using the herbarium technique. The trip was organised for two days that is on 20th and 21st of January 2023. The first day of the visit was to Malabar botanical garden which is in the Kozhikode of Kerala state. Malabar botanical garden is spread over 45 acres which consists of different sections comprising different plant communities. Students observed different plant species and gained the knowledge of plants growing in different habitats.

Respected madam,

Sub: Seeking permission to take Ist and IIIrd Semester BZ students to Shuka Vana and Kishkindha moolika bonsai garden, Mysuru on 5th January 2023.

As a part of National Bird Day celebration, The Zoology Department has planned a visit to Shuka Vana, a rehabilitation center for birds. This visit would create awareness about bird conservation in students. So, I request you to permit all the first and third semester BZ students accompanied by me and one teaching faculty of the Department to visit Shuka Vana and Kishkindha moolika bonsai garden, Mysuru on 5th January (Thursday) 2023 at 2.00pm. It would be a great learning experience.

Thanking you.

Date – 04/01/2023

FIELD VISIT TO SHUKA VANA, MYSURU

On 5th January 2023, The Department of Zoology organized a field visit to Shuka Vana, Sri Ganapathy Sachchidananda Ashrama, Mysuru on the occasion of National Bird Day.

All the students of CBZ and BZ along with Zoology and Botany department faculties departed from the college and reached the destination. As Shuka Vana is a parrot park, a rehabilitation center for birds, we could witness numerous indigenous as well as exotic birds from Indonesia, Malaysia, and Singapore. We also learnt that the Shuka Vana has made it to the 'Guinness World Records' for housing the largest number of bird species in an aviary. It has more than 450 species of parrots totaling over 2200 birds. Appreciating the morphology and pigmentation of birds we could also learn about its behavior, food habits and IUCN status.

Next, we visited "Kishkindha Moolika Bonsai Garden", which is located near Shuka Vana. The Garden consists of very valuable bonsai trees ranging in age from 1 year to 200 years collected from various countries around the world such as China, Indonesia, Malaysia, America, West Indies, Singapore etc.

We also visited 'Vishwam Museum' situated in the Ashrama and were able to see an eclectic collection of objects such as musical instruments, minerals, gemstones, crystals, carpets, paintings, coins and stamps, etc. We departed to our homes by 6.00PM.

Subject: "Permission for visit to Nandini Diary, Hassan"

Respected Sir/Madam,

With respect to the above cited subject, we would like to request you for permission to visit the HAMUL's Nandini Milk Diary at B.M. Road Hassan. This visit is to meet the syllabus guidelines of the University of Mysore for UG students of Fifth Semester Microbiology & First Semester Botany. They are expected to visit a Dairy industry for an exposure towards industrial processing and techniques. Consequently the students would like to visit your industry on Wednesday 21st December 2022.

A total of 50 students will be part of the visit, accompanied by 3 assistant professors. The list of students and accompanying faculty is attached with this letter. Kindly oblige to our request.

Thanking you,

Yours faithfully,

TOUR VISIT REPORT

“Manipal School of Life Sciences” (MSLS) on 16th & 17th June 2023

The Department of Biotechnology & Microbiology of Sarada Vilas College organised an institutional visit to the ***“Manipal school of Life Sciences (MSLS)”***, Manipal Acedeny of Higher Education, Manipal, Udupi-576104 ***on 16th & 17th June 2023*** for the ***UG-Final year, BMBT (B.Sc.) Students*** as part of the UOM syllabus (CBCS) requisite.

A total of 38 students were part of the visit along with 3 faculty members. Upon arrival, the students were greeted and addressed by Dr. K. P. Guruprasad, Associate Director, (MSLS) and the research scholars.

The students were taken through the different facilities of the institution such as the Green-house, Biophysics lab, Microbiology lab, Ageing lab, Radiology lab, Plant tissue culture lab, Drosophila lab and Animal tissue culture lab. The students witnessed the instruments used at different facilities and were thought about the research programs being carried out.

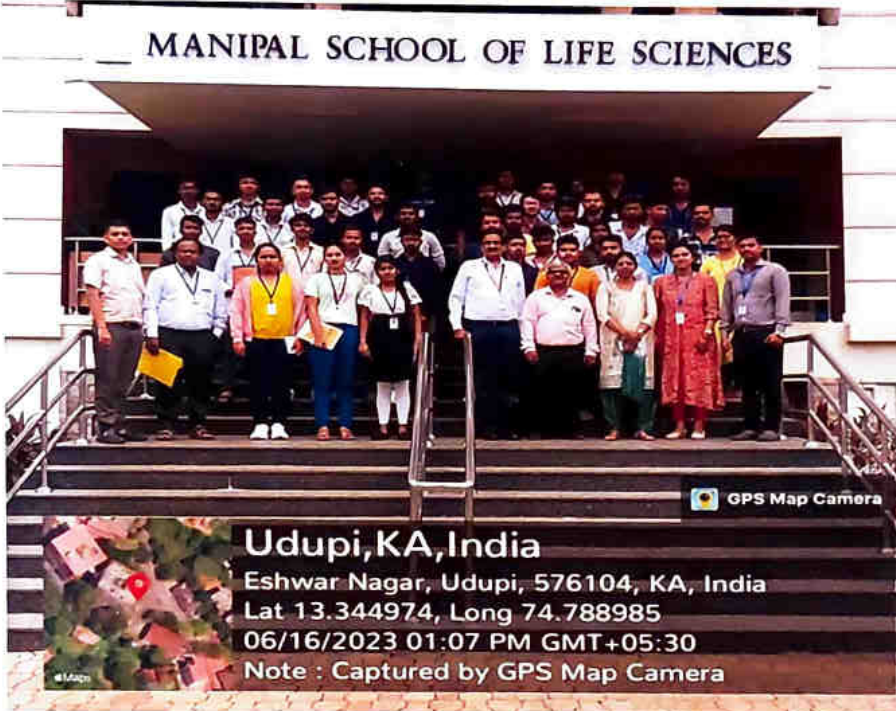

They also explored the Manipal Museum of Anatomy & Pathology (MAP) where numerous formalin-fixed specimens related to the human body and pathological conditions of various organs are housed, along with studs and skeletal specimens of both human and animal origins. The students also visited the experience theatre & planetarium where they learned about more about the Manipal institute and the solar system respectively.

Respected Madam,

Sub: Permission to visit Triphase Pharmaceuticals

With respect to the above subject, I request you to kindly permit the of First and second year BMBt Students to carry out the Field visit to the Triphase Pharmaceuticals and as a part of our study.

A total of 23 students will be part of the visit on 06/01/2023, accompanied by Suman, Assistant professor, Dept of Biochemistry. The list of students is acctached with this letter.

Kindly oblige to our request

Thanking you,

Your's faithfully

Likith Clement

Sub: Field Visit to Triphase Pharmaceuticals Pvt Ltd

Dear Dr,

As a part of study, a group of 23 students of first & second year BSc Biochemistry, Sarada Vilas College, Krishnamurthypuram, Mysuru had visited Triphase Pharmaceuticals Pvt Ltd, Mysuru on 06th January 2023 accompanied by Ms.Suman Assistant professor, Department of Biochemistry. Basic facility tour on how fermentation is carried out was explained.

Thank you

for

ACKNOWLEDGEMENT

We are extremely grateful for the Principal, **Dr. M Devika**, Sarada Vilas College, Mysore, for providing us the opportunity to visit the **Triphase Pharmaceutical Industry**, Hebbal Industrial Area, Mysore on **6th January 2023** for a one day industrial visit as per the requirements of the University of Mysore.

We give our sincere thanks to **Mr. Likith Clement**, Head of the department of **Biochemistry** for not only permitting us to go visit **Triphase Pharmaceutical Industry**, but also accompanying us in the visit. We are also thankful to our **Ms. Suman N**, Department of Biochemistry for her assistance and support during this visit.

Date: 06/01/2023

Place: Mysore

Thanking you,
Vinith Raj D

DECLARATION

I **Vinith Raj D** hereby declare that, I have taken part in the one-day industrial visit to **Triphase Pharmaceutical Industry, Mysore** on **6th January 2023** and am the sole author of this report.

I am submitting this report to Department of **Biochemistry, Sarada Vilas College, Mysore** in requisite to the syllabus requirement **Biochemistry Practical Paper-3** prescribed by the university of Mysore.

I also declare that I have not submitted this report or its like to any other department for the award of any degree.

JOURNEY TO OUR VISIT

Industrial visit to Triphase Pharmaceuticals, Mysore

Class: 3rd SEM B.S.c. BCBT

Faculty: 1) Mr. Likith Clement

2) Ms. Suman N

Industry Visit: Industry Visited: Triphase Pharmaceuticals, Mysore

An industrial visit at **Triphase Pharmaceuticals, Hebbal, Mysore** was done by the Biochemistry department 3rd SEM students on 6th January 2023.

The industrial visits were witnessed by all students of the class. Who were accompanied by the faculty **Mr. Likith Clement** head of the department of Biochemistry and **Ms. Suman N**, department of Biochemistry, all the students were very excited and left the campus on 6th January 2023, 12:30 pm by cab.

The journey was very comfortable and enjoyable. As the time pass by we reached our destination Hebbal Industrial Area at 1:00 pm in industry visit we have learned so many things, such visit really added up to the little knowledge of the student and everyone.

10. CONCLUSION

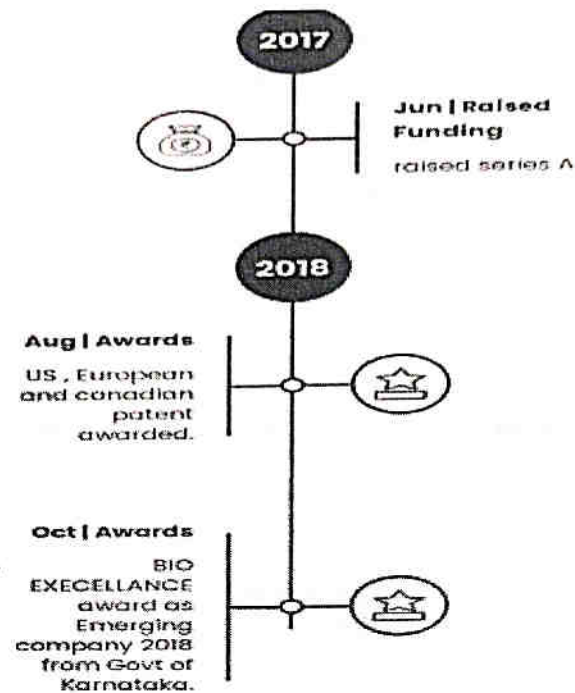

INTRODUCTION

Triphase Pharmaceuticals Pvt Ltd

Triphase Pharmaceuticals Private Limited is led by professionals and accomplished scientists from the biotech and food industries. The Company specializes in the development of high temperature stable probiotics and their application under Strain boost TM technology. Its probiotics are designed to fortify food and beverages and are being further developed as dietary supplements and pharmaceutical products addressing a range of diseases. Triphase has a Research & development facility and dedicated manufacturing unit under construction in Mysore . Armed with a US patent (August 2018), European patent (2019) and Canadian patent (2021) the company looks forward to bringing good and scientifically validated products for increasing the health and wellness of the people.

Timeline:

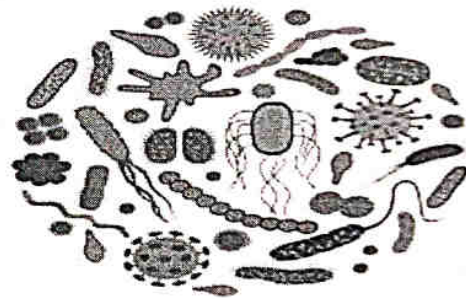

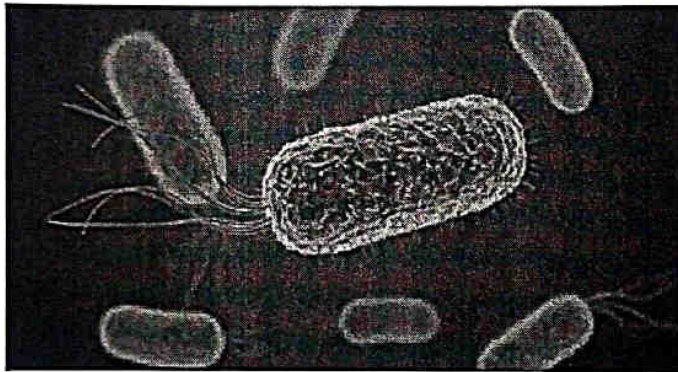

Probiotics

Probiotics are live microorganisms promoted with claims that they provide health benefits when consumed, generally by improving or restoring the gut microbiota. Probiotics are considered generally safe to consume, but may cause bacteria-host interactions and unwanted side effects in rare cases. There is some evidence that probiotics are beneficial for some conditions, but there is little evidence for many of the health benefits claimed for them.

The first discovered probiotic was a certain strain of bacillus in Bulgarian yoghurt, called *Lactobacillus bulgaricus*. The discovery was made in 1905 by Bulgarian physician and microbiologist Stamen Grigorov. The modern-day theory is generally attributed to Russian Nobel laureate Élie Metchnikoff, who postulated around 1907 that yoghurt-consuming Bulgarian peasants lived longer.

A growing probiotics market has led to the need for stricter requirements

for scientific substantiation of putative benefits conferred by microorganisms claimed to be probiotic. Although numerous claimed benefits are marketed towards using consumer probiotic products, such as reducing gastrointestinal discomfort, improving immune health,[8] relieving constipation, or avoiding the common cold, such claims are not supported by scientific evidence, and are prohibited as deceptive advertising in the United States by the Federal Trade Commission. As of 2019, numerous applications for approval of health claims by European manufacturers of probiotic dietary supplements have been rejected by the European Food Safety Authority for insufficient evidence of beneficial mechanism or efficiency.

FERMENTERS and it's type

A Fermenter is a device that is used to carry out the fermentation process utilizing microorganisms, which is why it is also known as a "Fermenter or Bioreactor." It contains all of the components required for the commercial synthesis of compounds such as antibiotics, enzymes, and drinks in a variety of sectors.

The microorganisms in the fermenter are built in such a way that a larger value of the product can be formed with a minimal amount of media. It has a wide range of applications in the food sector, wastewater treatment, and so on. Fermentation is the process of bioprocessing raw substrates using microbial biomass (mostly yeasts and bacteria).

Types of Fermenters

Fermentation systems can be liquid (also called submerged) or solid (also called surface). The majority of fermenters used in industry are types of submerged fermenters, which conserve space and are easier to manage and build.

Submerged fermenters come in a variety of shapes and configurations, and they can be classified as aerated or anaerobic, batch or continuous. Aerated Stirred Tank Batch Fermenters are the most often utilized fermenters. There are five different types of fermenters:

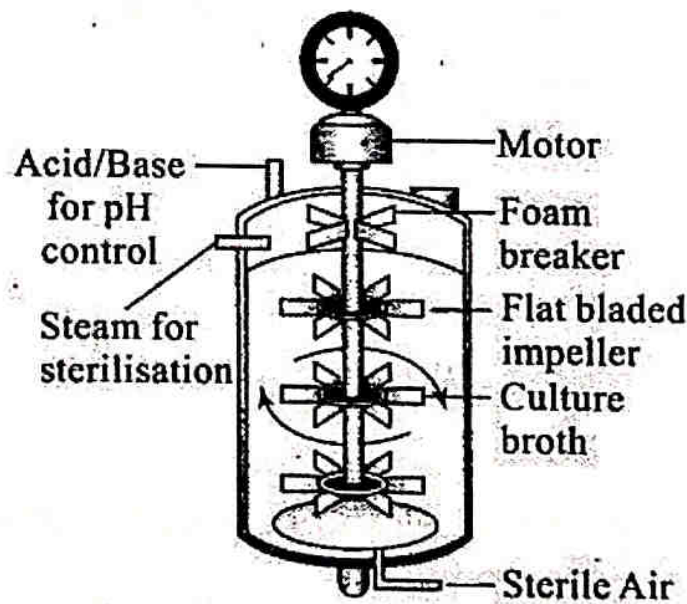

- 1) Stirred tank fermenter
- 2) Airlift fermenter
- 3) Fluidised bed fermenter
- 3) Packed bed fermenter
- 4) Photo fermenter

Stirred Tank Fermenter

The motor drive shaft and a variable number of impellers make up this component (more than one). The diameter of the impellers is a third of the vessel's diameter. This bioreactor has a height-to-diameter ratio of around 3:5. A single opening in the tube attached externally allows air to enter the culture media. It makes it possible for the contents to be distributed more evenly throughout the ship .The following are some of its primary functions:

- Homogenization
- Solid-state suspension
- The medium is aerated
- Change of heat

Rotating stirrer and baffle can be located at the top or bottom of a stirred tank fermenter. It mostly employs a batch fermentation procedure.

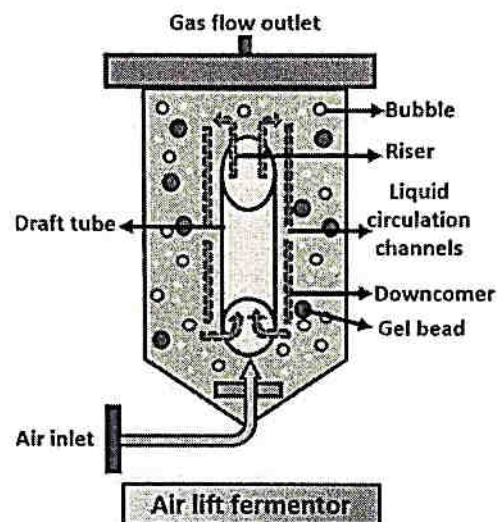

Simple stirred-tank bioreactor

Airlift Fermenter

It is made out of a single container that contains a hollow tube. "Draft tube" is the name for this hollow tube. At the bottom of the fermenter is a gas flow entrance that permits oxygen to pass through. The perforated disc or tube is connected to the gas flow input, allowing air to be distributed continuously.

Mechanical agitation arrangements are not present in this sort of bioreactor. The airlift name suggests that the medium is lifted aloft by the air. Internal liquid circulation channels allow the medium to move continuously. Fermentation takes place at a set volume and circulation rate in this environment.

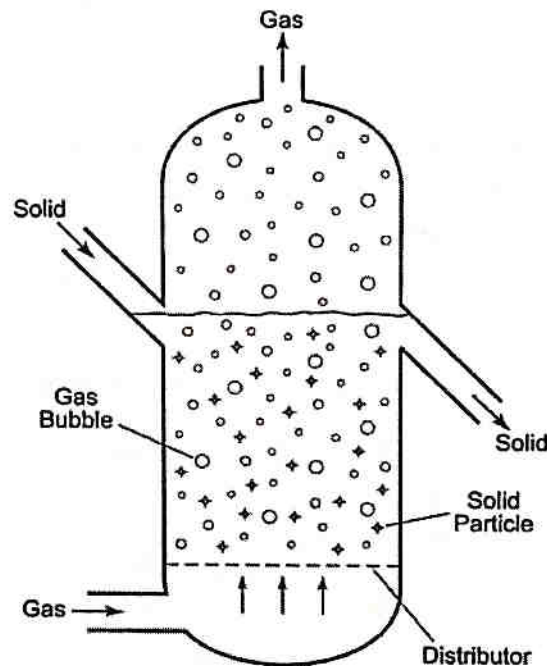

Advantages

- *Simple design with no moving parts or agitator for less maintenance, less risk of defects.
- *Easier sterilization (no agitator shaft parts)
- *Low Energy requirement vs stirred tank: Obviously doesn't need the energy for the moving parts (agitator shaft).

Fluidized Bed Fermenter

This bioreactor has a larger top section. The fluid's velocity is slowed by this expansion. It has a narrow bottom section. It's made in a way that:

Inside the vessel, the solid remains. And then there's a flow of liquid out the other end.

Advantages of Fluidized Bed Reactor:

Uniform Particle Mixing: Due to the intrinsic fluid-like behavior of the solid material, fluidized beds do not experience poor mixing as in packed beds. This complete mixing allows for a uniform product that can often be hard to achieve in other reactor designs. The elimination of radial and axial concentration gradients also allows for better fluid-solid contact, which is essential for reaction efficiency and quality.

Packed Bed Fermenter

It comprises a cylindrical vessel and a biocatalyst-packed bed. The properties of the solid matrix employed in the packed bed fermenter are as follows:

- 1) Non-porous or porous
- 2) Extremely compressible
- 3) Rigid

A nutrient broth constantly flows over the immobilized biocatalyst in this type of fermenter. Following that, a product is released into the fluid at the bottom of the culture jar, where it can then be retrieved. Fluid can flow upward or downward in this area.

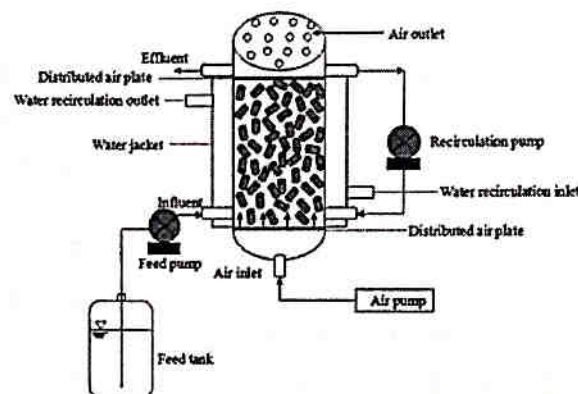

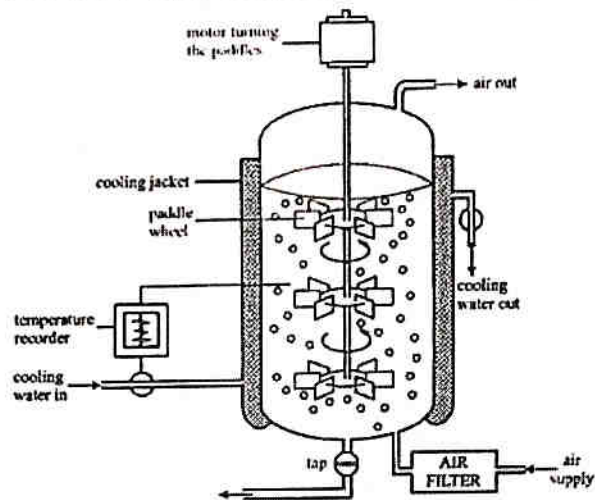

Photo Fermenter

This fermenter operates on the basis of light energy, which can be achieved through direct sunshine or artificial lighting. It's utilized to make p-carotene, astaxanthin, and other antioxidants. Glass or plastic make up the majority of this sort of bioreactor. The following components make up a photo fermenter:

- 1) Container
- 2) Tubes or Panels

Diagram of Photo Fermenter

Conclusion about FERMENTER

Hence, fermenters are a closed cylindrical tank that supports the biochemical and chemical activity of microorganisms to carry out the conversion of raw materials into usable products. Because it uses microbial biomass to complete the fermentation process, it is also known as a bioreactor. Fermentation procedures are separated into surface and submersion processes depending on the usage of stock culture. Surface fermentation involves growing biomass on the raw substrate's surface, whereas submersion fermentation involves growing microbes in the raw substrate.

Upstream & Downstream Processing

The production of active pharmaceutical ingredients (API) of biopharmaceuticals typically starts with generation of the API via living cells known as the upstream process, followed by purification of the target API, or the downstream process.

Upstream Processing

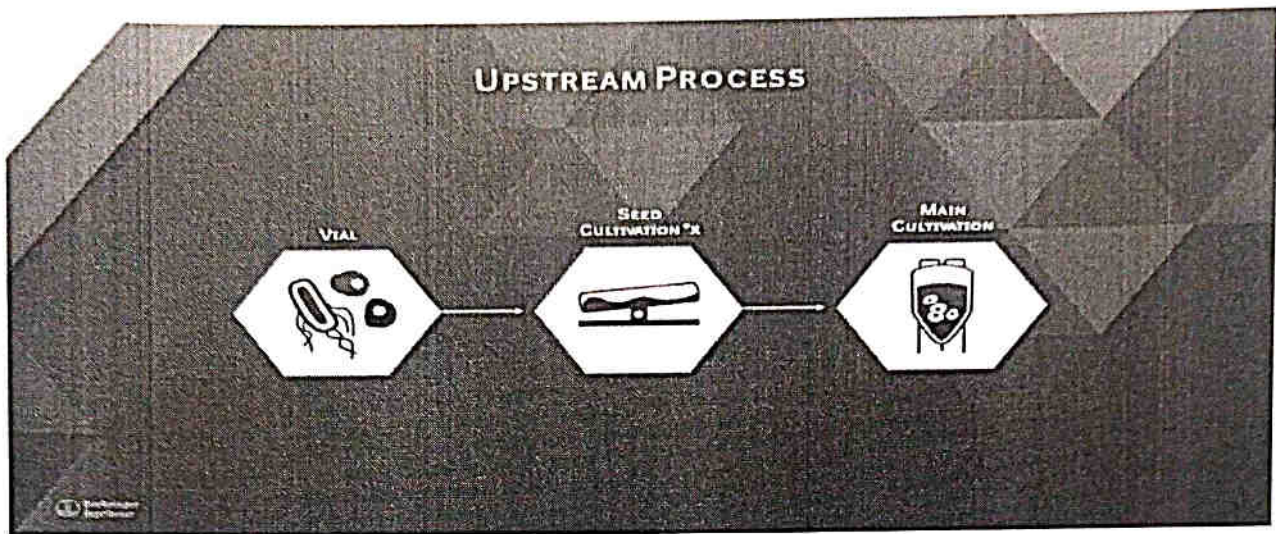

The initial steps of the upstream process start with milliliter quantities of mammalian or microbial cells engineered to produce a specific protein molecule. Using several cultivation steps in a controlled environment within a bioreactor, these cell cultures are grown to a volume of several thousand liters to produce several kilograms of the desired API.

*Mammalian Cell Culture:

Mammalian cell culture is used to produce large, complex proteins such as monoclonal antibodies. Utilization of mammalian cells allows for modification of the API, similar to those which may occur in human cells (e.g. glycosylation). Production processes with mammalian cell cultures take several days to weeks. Growth of these cells requires a complex and well-balanced mixture of nutrients as well as relatively gentle growth conditions regarding stirring and aeration.

Microbial Organisms:

Microbial organisms can grow much faster with cultivation times of several days or even hours. Smaller sized molecules such as peptides, enzymes, antibody fragments and protein scaffolds can be produced very efficiently. Microbial organisms are usually very robust and can grow to high cell densities generally several orders of magnitude beyond mammalian cell cultures. Microbial organisms typically have some limitations concerning the size of the protein and "human-like" modification of the molecules.

Downstream Processing

Following the generation of the protein or antibody molecule, isolation and purification from the complex mixture of host cell proteins, cells, cell debris, nutrients and waste materials must now take place.

Purification begins with separating the cells from the media. In most mammalian cultures, the protein is secreted into the media, thus the supernatant must be collected for further purification. In microbial production, the protein can also accumulate within the cells, therefore the cells need to be disrupted and the cell debris separated from the protein of interest. Insoluble products including unfolded, pure proteins sticking together, known as inclusion bodies must be refolded to achieve their native and active conformation. Precipitation steps based on temperature, pH, or chemical interaction can be used for removal of process related impurities.

The solution containing the protein of interest is purified using different techniques. Chromatographic separation steps are widely used; they are based on separation principles by charge, size or hydrophobicity of the protein, or by specific affinity to the chromatographic resin. A wide range of filtration techniques are used to separate the protein from the remaining

Autoclave

An autoclave is a device that works on the principle of moist heat sterilization, wherein saturated steam is generated under pressure in order to kill microorganisms such as bacteria, viruses, and even heat-resistant endospores from various types of instruments. This is done by heating the instruments within the device to temperatures surpassing the boiling point of water.

This process is also embodied by gas laws, which basically states that the higher the pressure is within the device, the higher the temperature increases. In other words, pressure and temperature are directly proportional to each other.

It is also important to note that it is the temperature that kills the microorganisms, not pressure. Rather, higher pressures are capable of increasing the boiling point of water, which thus increases the temperature of sterilization. High pressure also helps heat to rapidly spread within the material.

Autoclaves typically yield a temperature of about 121 degrees Celsius, taking about 15-20 minutes to complete the sterilization process. However, autoclave cycles may be adjusted accordingly by the working technician.

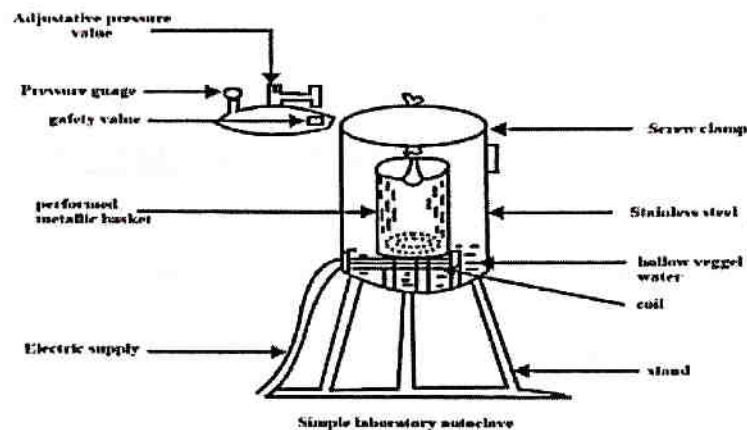

Types Of Autoclaves?

Though there are different types of autoclaves, all of them operate the same way. The type of autoclave depends on what setting they will be used in. Here are some of them:

- 1). Pressure Cooker Type (N-type).
- 2). Gravity Displacement Autoclave.
- 3). Positive Pressure Displacement Autoclave (B-type).

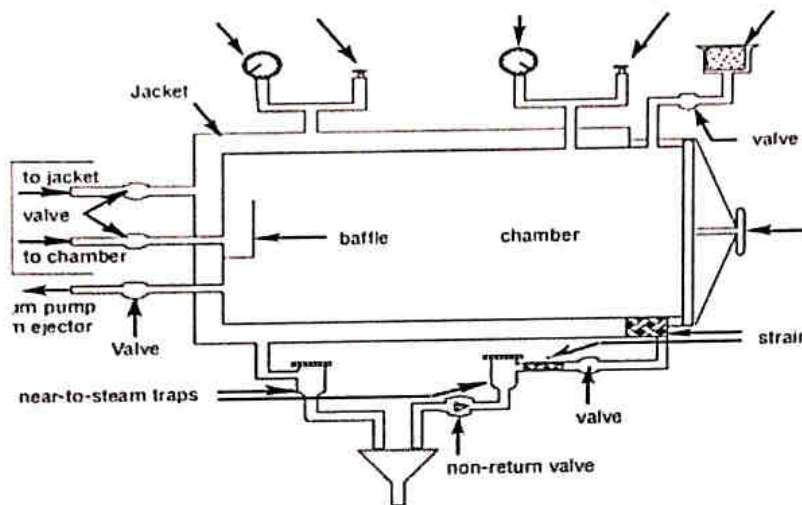

1). Pressure Cooker Type/Laboratory Bench

:- Autoclaves (N-type): This autoclave is commonly used around the world. It contains an air and steam discharge tap, a safety valve, and a pressure gauge. It also contains an electric immersion heater located at the bottom of the chamber.

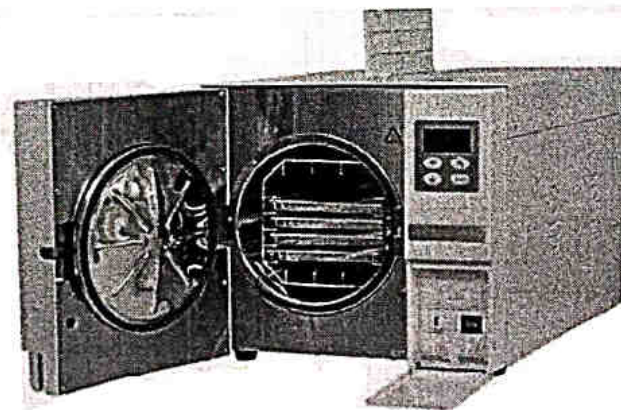

2). Gravity Displacement Autoclave:

:-These are commonly used in laboratories. This autoclave generates steam inside the chamber through a heating unit, which can move within the chamber for optimal sterilization. It is also relatively cheaper compared to other autoclaves.

3). Positive Pressure Displacement Autoclave (B-type) :-

This type of autoclave generates steam in a separate steam generator unit, which then transfers the steam into the autoclave. It is known to be faster since steam can be generated in just seconds.

4). Negative Pressure Displacement Autoclave (S-type):

Negative pressure displacement autoclaves have both a steam generator and a vacuum generator. The vacuum generator sucks out all the air within the autoclave, while the steam generator, like the positive pressure displacement autoclave, generates heat and passes it into the autoclave. This autoclave is the most recommended, but also the most expensive.

EVAPORATORS

Evaporators are used to convert liquids into gaseous state via heat transfer. All of the basic evaporators have mechanism to separate liquid and vapor by means of a heat transfer. The raw material fed into the evaporator and passes through heated tubes. The heat evaporates the water within the raw material.

Application of evaporators

Evaporators are used widely in processing industries that work with fluids and chemicals. They work best in lowtemperature applications in food and pharmaceutical industries and in effluent treatment. Apart from manufacturing reliable and cost-effective evaporators for over two decades, Shachi has recently introduced the new self-cleaning evaporator in India in collaboration with Klaren International BV from Holland for effluent treatment.

Types of evaporators

- 1) Forced circulation evaporators
- 2) Rising film evaporator
- 3) Falling film evaporator
- 4) Agitated thin film evaporator
- 5) Self-cleaning evaporator.

Biochemical oxygen demand (BOD)

Biochemical oxygen demand (BOD) is the amount of dissolved oxygen (DO) needed by aerobic biological organisms to break down organic material present in a given water sample at a certain temperature over a specific time period. The BOD value is most commonly expressed in milligrams of oxygen consumed per liter of sample during 5 days of incubation at 20 °C and is often used as a surrogate of the degree of organic pollution of water. BOD reduction is used as a gauge of the

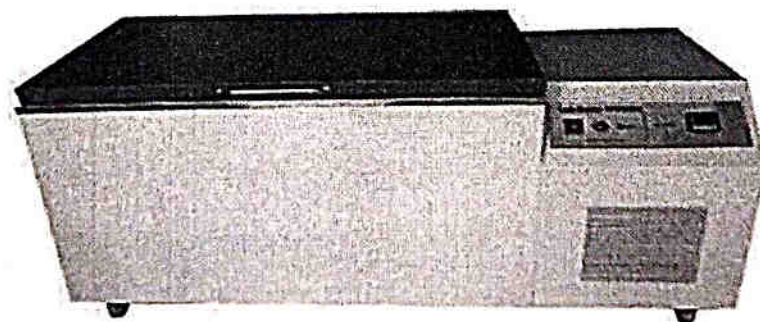

effectiveness of wastewater treatment plants. BOD of wastewater effluents is used to indicate the short-term impact on the oxygen levels of the receiving water.

BOD analysis is similar in function to chemical oxygen demand analysis, in that both measure the amount of organic compounds in water. However, COD analysis is less specific, since it measures everything that can be chemically oxidized, rather than just levels of biologically oxidized organic matter.

DEEP FREEZER

Deep freezers are the testing equipment that are used to preserve and store food products, medical equipment, blood samples, medicines and injections, etc. for a long period of time. Deep Freezers are used for industrial purposes as well as for household purposes. Moreover, deep freezers are also used in restaurants and supermarkets to preserve the raw food for a long period of time.

There are numerous types of deep freezers such as blood bank refrigerators, freezer drier, ultra-low deep freezer, deep freezer vertical and many more. These devices are available in different sizes and shapes sometimes it is designed with compact designs and sometimes with regular designs. The specifications and functions of the instruments varies as per the requirements of the test application.

LAMINAR FLOW AIR

Laminar air flow is an equipment that is generally used in Microbiology laboratories. It consists of a chamber with an air blower attached to its rear side that allows the flow of air with a uniform velocity in straight lines that are parallel to each other. The main purpose of a laminar flow cabinet/hood is to form a contaminant-free work environment. For this purpose, it filters and captures all types of impurity particles entering the cabinet. It makes use of a filter pad and a special filter system known as a high-efficiency particulate air filter or HEPA filter, which can remove the airborne impurity particles that are up to 0.3 micrometers in size. A laminar air flow chamber is also known as a laminar flow closet or a tissue culture hood.

A laminar flow cabinet or tissue culture hood is a carefully enclosed bench designed to prevent contamination of semiconductor wafers, biological samples, or any particle sensitive materials. Air is drawn through a HEPA filter and blown in a very smooth, laminar flow towards the user. Due to the direction of air flow, the sample is protected from the user but the user is not protected from the sample. The cabinet is usually made of stainless steel with no gaps or joints where spores might collect.

It consists of a chamber with an air blower attached to its rear side that allows the flow of air with a uniform velocity in straight lines that are parallel to each other. The main purpose of a laminar flow cabinet/hood is to form a contaminant-free work environment.

LAMINAR AIR FLOW APPLICATIONS

Laminar air flow systems are used in various applications such as life science research, mushroom cultivation, microbiology, IVF, IUI and

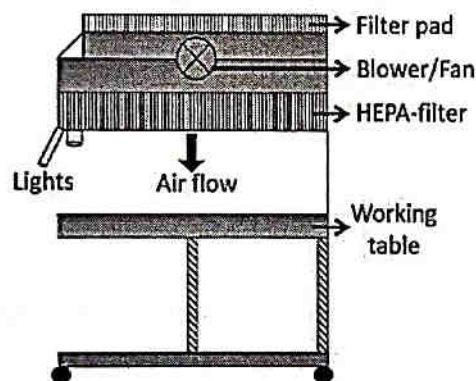

histopathology / pathology lab, plant tissue and cell culture and pharmaceutical and electronics industry and many more.

TYPES OF LAMINAR AIR FLOW

Vertical Laminar Air flow

It is the most used type of laminar air flow. In vertical flow cabinet, room air is entered in working area through HEPA filter fitted on top of the cabinet. Thus, air flows downward (vertically) towards work surface and leaves the cabinet sweeping out particles and bacteria.

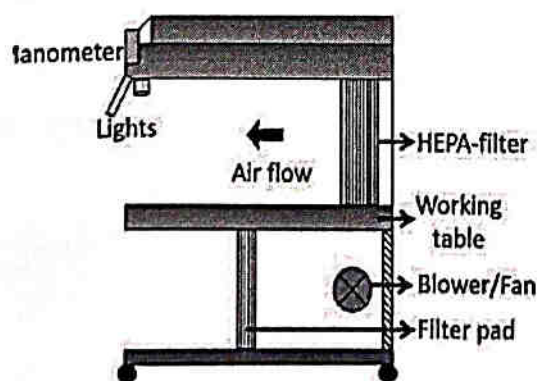

Vertical Laminar Flow Cabinet

Horizontal laminar air flow

In horizontal laminar air flow cabinet, room air is entered in working area through HEPA filter fitted on the back side of the cabinet. Filtered air flows horizontally towards the user creating sterile working environment.

Horizontal Laminar Flow Cabinet

Conclusion

The industrial tour was the interface between the college life and the corporate world. All those who attended experienced the moment. It was clear that all the basic and fundamental of each subjects and Management tactic should be learnt thoroughly. students learnt how production process works, what are the current Scenario of Market, which management tactic should be selected for career. They told us what the needs of the management, what they are expecting from us as the freshers. They guided us how to prepare for the corporate world after completing education.

And we are learned about different types of Fermenters and it's use, Then we learned about Probiotics and there use and how we are using then in your Pharmaceutical industries. Then we all so seen CENTRIFUGE, A centrifuge is a device that uses centrifugal force to separate various components of a fluid. And we seen various types of AUTOCLAVE, An autoclave is a machine used to carry out industrial and scientific processes requiring elevated temperature and pressure in relation to ambient pressure and/or temperature.

Then we observed Biochemical oxygen demand (BOD), Biochemical oxygen demand (BOD) is the amount of dissolved oxygen (DO) needed (i.e. demanded) by aerobic biological organisms to break down organic material present in a given water sample at a certain temperature over a specific time period.

The experience of this tour was really fantastic and unforgettable. It was reverberating experience which cherished all of us. I got valuable information from this industrial tour and they guided us how to stand in the corporate world in the era of competition. I got to learn a lot many more things from this tour.

Respected Sir/Madam,

Sub - Letter of Permission for an Internship Programme for Environmental Monitoring at our Laboratory.

We M/s. **CADD Solutions Technologies Pvt. Ltd.**, an National Accreditation Board for Laboratory (NABL) accredited lab as per ISO/IEC:17025:2017 and also certified by ISO 9001:2015 & OHSAS 18001:2007 established in 2018 and is privately setup, Independent company that provides the highest value and quality environmental monitoring, testing, analysis assessment services to benefit both citizens and the natural environment. It operates in a flexible, innovative manner that is responsive to the needs and expectations of individuals/customers. In future we will be having an MOEF Accreditation Laboratory under EPA rules.

We also conducting the Internship programme from last 4 years and around 1000 students attended the internship programme at our laboratory.

I, as the Director of **CADD Solutions Technologies Pvt. Ltd.**, writing this letter to request you to give an opportunity to conduct an Internship program on **“Hands on Training on Analysis of both Chemical and Microbiology Lab and Air & Stack Monitoring”** in our Premises.

The Internship program is conducted by our Professionally Trained Staffs on payable basis.

They will get to learn about the situation in our current environment.

This will be a great chance for the students to know more about the environment and even be aware of the problems happening in the environment.

We will also get to know what students think about the environment and what solutions or ideas they have to overcome the problems through this.

This letter requests the internship program to be held at our lab. We would like to say to you that this Training program will bring many changes to the students.

From this Training, we will also get to know about their opinion towards our environment. Lastly, I would request you to please accept our letter and permit your students to take this opportunity to improve their skill and knowledge towards Analysis of Chemical and Microbiology Testing.

After successful completion of the internship program, we will be issuing a certificate to students.

Dear Madhu Kumar,

Sub: Internship Offer Letter

We are pleased to offer you an internship as **Trainee Software Engineer** with **Ogma Technologies LLP, Mysuru**. Your internship shall **commence on 12-04-2023** and shall **end on 12-10-2023**. You will work 25 hours per week totaling 650 hours for the duration of the internship.

Since this is a paid internship, you will be provided a stipend of Rs. 4,000/- per month.

During your internship period with Ogma Technologies LLP, you may have access to trade secrets and confidential or proprietary business information belonging to Ogma Technologies LLP. By accepting this offer, you acknowledge that this information must remain confidential and agree to refrain from using it for your own purposes or disclosing it to anyone outside of Ogma Technologies LLP. Also, you agree that upon completion of your internship, you will promptly return any company-issued property and equipment along with information and documents belonging to the company. The internship cannot be construed as an employment or an offer of employment with Ogma Technologies LLP.

We look forward to having you begin your career at Ogma Technologies LLP and wish you a successful internship. Welcome to our team!

Please confirm your acceptance of the terms of this offer by **12-04-2023** failing which, we have the right to cancel the internship.

Regards,

Rakesh R

Access 2 Justice Technologies & Solutions

Date: April 21, 2023

Shreyas Rao H Mohite
Sarada Vilas College, Krishnamurthy Puram,
Mysuru, Karnataka 570004

Dear Shreyas Rao H Mohite,

It is our pleasure to formally take you onboard as a **Project Intern – ML Team**, with effect from **01/05/2023** and a monthly stipend of **Rs. 10,000/-** (Rupees Ten Thousand Only) for a period of three months. There will be an additional bonus of up to 50% of your fixed pay (i.e., INR 5000), subject to your contributions and performance during the internship program as evaluated by your project lead. During this program you will be provided with opportunities to contribute to the ongoing projects at Access 2 Justice and/or do the proof-of-concept (POC) on niche technologies. By the end of the program, you are expected to complete the project work assigned by your lead.

This offer is subject to your compliance with our terms & conditions of employment and/or association as suggested below, please go through the same and return the signed copy of this letter as a token of acceptance within two (2) working days failing which this offer letter will stand cancelled.

1. You will be required to display professionalism throughout your stay at Access 2 Justice
2. You will be required to sign an Non-Disclosure Agreement as per company terms
3. You are recommended not to take leaves during the internship program, however, under unavoidable circumstances, you shall notify your lead in advance

Our team at Access 2 Justice congratulates you on this new appointment. Please sign the duplicate copy of the offer and return to the **Manager - Human Resources**. At the time of joining, you are requested to submit a copy of your Aadhaar card and your PAN card.

We welcome you to Access 2 Justice and look forward to a mutually beneficial association.

For Access 2 Justice:

Aathira Satish

Dear Sir,

Subject: Seeking permission for Industrial Visit for final year M.Sc. Chemistry students

With reference to above context, I intend to bring this to your kind notice that, Sarada Vilas College, Mysuru, a college affiliated to University of Mysore is offering M.Sc. (Chemistry) course since past 09 years. I am happy to inform you that 43 students are studying in final year M.Sc. (Chemistry) in the present academic year in our College and they are interested to visit your esteemed company, R L Fine Chem Pvt. Ltd, Bangalore to enrich their knowledge. I will be grateful if you could permit our students and accompanying four staff members to visit your company and guide them on 16.07.2022. It will be appreciated if you confirm through E-Mail.

Looking forward to your positive reply.

Thanking You.

Industrial visit

An industrial visit to "*RL fine chem Pvt. Ltd*". # 15, KHB industrial Estate,. Yelahanka, Bengaluru was organized by the Post-Graduate department of chemistry, Sarada Vilas College, Mysuru-04.

M.Sc. (Chemistry) final year students and four faculty members, (Dr. Nanjundaswamy G S, Vinod D, Ganesh R and Geethanjali Y.N) visited to *RL fine chem Pvt.Ltd* . Situated at KHB, Industrial Estate, Yelahanka, Bangalore-560064 on 16/07/2022 Saturday.

Students and faculty members left the Sarada Vilas College campus at 5:00 AM and reached the company at 10:00 AM.

After the security check of all the students and staffs were taken into conference hall to give brief introduction, on products manufactured in the Industry and safety measurement to be followed inside the industry by Mr. Murlidharan Manager. The main products manufactured in industry are API (active pharmaceutical ingredients like Amitriptyline hydrochloride, Chlorpromazine hydrochloride, Clomipramine hydrochloride, Doxylamine succinate etc.

. we were divided into two batches and at first we were taken to Solvent loading and unloading area and to storage area there they briefly explained about the storage of chemicals(Raw materials),then to chemical reactors there they explained different types of chemical reactors, like stainless steel , glass layer reactors, and they also explained some of the drying techniques of products obtained and quality test of them and explained the instrumentation of HPLC and GC chromatography technique and also about the dispatch of the product.

Finally we were taken to seminar hall by our guide Mr. Murlidhar and Dr. Shivakumaran, they interacted with students and answered each and every question asked by students.

The industrial visit to *RL fine chem pvt. Ltd* company enriched student knowledge and operating techniques of varieties of instruments and equipments.

Dear Dr Devika M,

Greetings from Supreem Pharmaceuticals !!

This has reference to the telecon with you today.

We are pleased to offer an internship for 2 students at Supreem Pharmaceuticals Mysore Pvt Ltd, Nanjangud.

The following are the guidelines:

- Letter from College addressed to the Company
- Duration & Period of internship: (Start date & end date) - can be communicated back by email.
- ID Proof of the students along with the college registration number / id number / Total credits assigned.
- The internship / project certificate will be provided only after successful completion of the internship / project and at no point in time will be provided before the completion. Holiday as per company's norms.
- The Students will have to sign the IT Policy and Good Manufacturing Practices of the Company
- Male candidates should come neatly shaven every day (razor shave & not with trimmer). Nail to be trimmed regularly for both male and female candidates
- The Company **will not be providing accommodation and travel**
- Stipend **shall not** be provided during the period of internship / projects undertaken
- **The students will have to get their aprons during the said period**
- Breakfast and lunch will be provided for the students pursuing their internship / projects
- The company shall not be responsible for any accidents / health related issues during the time of internship
- Frequent leaves are a strict "NO"
- Students will have to submit their mobile numbers, regularly accessed personal email id and alternate mobile number for emergency contact.

Dear Sir,

Sub: Industrial Internship for M.Sc. (Chemistry) students.

Ref: E- mail. Received on 15-Dec.2022

With reference to the above, my sincere thanks to you for giving an opportunity to our M.Sc. (Chemistry) students to do internship at your esteem company. We are sending below mentioned

M.Sc.(Chemistry)- III semester students for Internship

1. Shashank Parameshwar Hegde (Reg.No. P01BG21S0007)
2. Mahadevaswamy .K (Reg.No.P01BG21S0020)

I have communicated your instructions to the students and also instructed the students strictly to abide by the rules and regulations of your company during their stay at your esteem company. Looking forward for your early reply regarding preferred date and time of internship.

Thanking you

Truly yours

SOPHISTICATED ANALYTICAL INSTRUMENT FACILITY

INDIAN INSTITUTE OF TECHNOLOGY MADRAS

RefNo: 08/05/2023071807

Date: 23/05/08

Request for Permission to visit Facilities in SAIF

Name	Dr R Gururaja	Designation	Coordinator
Address	Post-Graduate department of chemistry, Sarada Vilas College, Mysuru	City / Town	Mysuru
State	Karnataka	Pincode	570004
Email	dr.gururaja@gmail.com	Phone Number	9448957959
Office Number	08212332479	Requested date of visit*	2023-06-09

In case of lab visits by group of students/faculty/employees from Industries/R&D labs, kindly provide the number of visitors and their designation (eg. Student/faculty/staff etc) and the labs they want to visit in particular. This is needed to obtain security clearance. A basic knowledge of the use/application or principle of working of the instrument will help you understand things better in the available time. Kindly note that the size of the laboratories restricts us to 25 visitors at a time.

Total number of visitors	25	No of Students	21
No of staff	4	Any other request	nil

It is mandatory that a prior written / e.mail confirmation is obtained from the Head of SAIF before you visit. Requisition forms are to be formally approved and signed by the Head of the Department or Guide or a senior official of your institution/company.

Signature with seal

Dr. R. Gururaja

* Normally all visits to SAIF are arranged in the afternoon from 1400hrs to 1700hrs (2pm-5pm). In special circumstances a visit can be arranged in the morning (1000hrs to 1300hrs) for which a request has to be marked to saif@iitm.ac.in. Kindly make sure that the requested date is a working day for IIT Madras.
