REPORT ON VISIT TO KUKKARAHALLI LAKE TO STUDY ALGAL
BLOOMS**

A visit to Kukkarahalli Lake on 06th August 2022 was organized by the Department of Botany for II semester students to study algal blooms which is a part of their curriculum prescribed by the University of Mysore.

We visited the lake along with 28 students of II semester in the morning. We assembled near the entrance of the lake by 6'o clock in the morning and took a walk around the lake. The lake was sparsely covered by algal blooms due to heavy rainfall. We assisted the students in identifying algal blooms and explained them about harmful aspects of algal blooms. The lake water where the dense algal blooms were observed was collected for further observation in the laboratory which helps the students to know about the algal communities that are responsible for causing blooms.

Our visit to Kukkarahalli Lake was not only circumscribed to the study of algal blooms we also made observations on different hydrophytes growing in the lake, and different species of higher plants which made us to briefly study the vegetation of Kukkarahalli Lake. Students also collected some hydrophytes like *Pistia*, *Eichhornia*, *Azolla* from the lake to preserve them in the department museum.

ABOUT MYSORE:

Mysore or Mysuru, a city in India's Southwestern Karnataka state, was the capital of the kingdom of Mysore from 1399-1947. In its center is opulent Mysore Palace, seat of former ruling Wodeyar dynasty. The palace blends Hindu, Islamic, Gothic and Rajput styles. Mysore is also home to centuries-old Deva Raja market, filled with spice, silk and sandal wood.

Mysore ranks 5th among Indian cities that attract foreign students. Students from 52 countries study here for undergraduate and post graduate courses. Around 1000 students arrive in Mysore every year for higher studies.

ABOUT THE COLLEGE:

Sarada Vilas College located in the heart of beautiful and heritage city Mysuru is a fragrant flower in the bucket of the famous Sarada Vilas Institutions. It was born as an intermediate College in the year 1945, it grew up into a First Grade College in 1952 offering Bachelor Degree in Science, both Physical and Natural Sciences. In 2013, extended its academic activity by launching B. Com and BBM (now BBA), further extended its academic initiative by starting M.Sc., (Gen. Chemistry) in 2014 and M.Com program from 2017.

ABOUT THE DEPARTMENTS

BOTANY : The Department was started in 1963 as department of Biology to cater the students of Mysore city. Later in 1965, the department was bifurcated into the departments of Botany and Zoology, and since then, the department has a legacy of imparting quality education to thousands of students with a state-of-the-art laboratory, and good collection of specimens, fossil slides, equipment and a herbarium.

The department has carved a niche in the city of Mysore and owes its credit to the then eminent Professors of the department, Prof. S Lakshminarayana, Prof. A N Nagarathamma, Prof. K G Shashikala and Prof. Y Gururaja.

BIOCHEMISTRY department was started in 1993. It has qualified and dedicated faculty, with well-equipped laboratory. Department is regularly hosting special lectures to enlighten the future aspirants of Science. The students are taken to special visits to reputed industries and institutes to expose them to the recent developments in the area.

ABOUT WORK SHOP:

Drug designing includes various aspects including the assessment of actual biological properties of the drug in question. In vitro biological assessment including antioxidant properties and enzyme inhibition efficacies are a prerequisite for a drug to be taken forward to the in vivo investigations. Accordingly, this workshop is specially designed to enhance the laboratory skills and research perspective among UG and PG students. The one-day workshop includes preparation of fractions of plant extracts rich in phenolics and flavonoids while their antioxidant and anti-inflammatory properties are assessed using free radical scavenging assays in vitro.

Organogenesis In Plants:

Terms To Be Known:

- Tissue Culture
- Totipotency
- Differentiation
- Dedifferentiation
- Redifferentiation
- Phytohormones

What is Organogenesis:

The process of initiation and development of plant organs such as root, stem, leaves, is called organogenesis

Tissue culture: A method of biological research in which fragments of tissues from an animal or plant are transferred to an artificial environment in which they continue to survive and function.

Medium used For Tissue Culture:

Murashige and Skoog medium or Ms media.

The two stages of Organogenesis

1. **Caulogenesis:** It is the ^{stage} ~~process~~ of development of shoot it is induced by the more concⁿ of cytokinin or less concⁿ of Auxin.
2. **Rhizogenesis:** It is the stage in which development of root takes place it is induced by the more concⁿ of ~~cyto~~ Auxin or less concⁿ of cytokinin.

The Role of Phytohormones:

The two phytohormones which play the major role here are Auxin and cytokin. The excess/more concentration of Auxin in the media promotes growth of root while excess concⁿ of cytokinin promotes the growth of shoot hence regulation of growth

Dictyostelium discoideum

i) Definition:-

Dictyostelium discoideum is a species of soil-dwelling amoeba belonging to the phylum Amoebozoa, infra-kingdom Mycetozoa. Commonly referred to as slime mold. It is a eukaryote that transitions from a collection of unicellular amoebae into a multicellular slug and then into a fruiting body within its lifetime.

ii) Stages:-

- Vegetative.
- aggregation.
- migration.
- culmination.

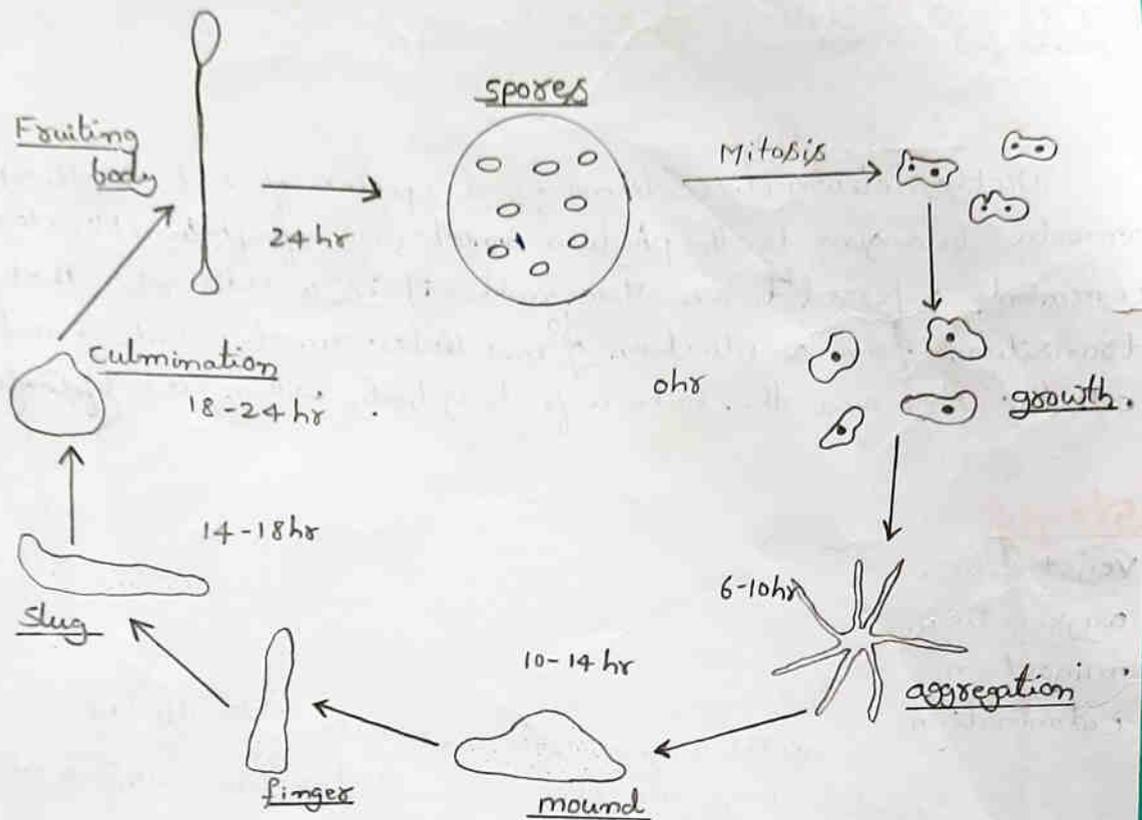

* the asymmetric distribution of cellular compounds along a particular axis within a cell.

iii) Cell polarity:-

- * Cell polarity is essential for unicellular and multicellular stages of Dictyostelium development.
- * Chemotaxis during early development requires each cell to rapidly reorganize its cytoskeleton to point towards a source of cAMP.
- * This involves a balance between local induction of F-actin polymerization and suppression of pseudopods that point in other directions.
- * Both the lipid phosphatidylinositol (3,4,5) triphosphate and the soluble signal cAMP have been implicated in these processes.
- * In addition to conserved and novel proteins.
- * During later development cells adopt newly discovered, alternative modes of movement and interact through adhesion molecules. Finally, cell polarize secretion to particular regions of

of their surface.

iv) Life Cycle:-

- * After the onset of starvation, periodic signals of cAMP lead to polarization of the cells and initiate development.
- * localized assembly of signaling complexes, directed cytoskeletal rearrangements and distinct recruitment of proteins are essential components of cellular polarity.
- * when starved, individual amoeba come together and release the chemoattractant cAMP in waves causing an increase in cell motility and highly co-ordinated cellular movement towards the focus of the cAMP (cyclic adenosine monophosphate).
- * The cells then come together to form a multicellular 3D structure, a natural 3D network.
- * This occurs within 8-10 hr after the growth..

The aggregation of free-living single amoebae into multicellular aggregates → mounds.

In the mounds, the initially homogeneous cell population starts to differentiate into a few types of prestalk cells and prespore cells.

Differentiation of prestalk and prespore cells occurs in random positions in the mound.

However, in time some of the prestalk cells accumulate at the top of the mound and form a tip.

While prespore cells occupy the rest of the mound.

The mound elongates under the control of the tip, and after a transient period the hemispherical mound transforms into the cylindrical → slug.

The slug which falls down on the substrate and starts to migrate under the influence of the right environmental signals.

The slug transforms into a fruiting body consisting of stalk and spore cells.

The stalk cells are dead and vacuolated while the spores survive and await favorable conditions to germinate and release amoebae again.

The cycle starts and continues again.

Applications:-

To investigate many cellular processes.

Study chemotaxis.

Human disease pathogenesis.

Cell motility, etc.

Torsion Pendulum

A torsion pendulum consists of a rigid metallic frame 'D' is a solid circular disc of moment of inertia 'I', mass M, and radius 'R'. The wire 'AB' of length l and radius 'a' is fixed at the end 'A' & the lower 'B' is clamped to centre of disc D.

When the disc D is rotated about the axis AB the wire AB gets twisted. The disc executes SHM. At any instant, the deflecting couple is equal to restoring couple.

$$\therefore I \alpha = -c\theta$$

$$I \frac{d^2\theta}{dt^2} = -c\theta$$

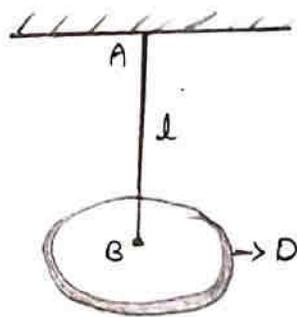

(-ve sign represents the opposite to each other)

$$\therefore I \frac{d^2\theta}{dt^2} + c\theta = 0$$

$$\frac{d^2\theta}{dt^2} + \left(\frac{c}{I}\right)\theta = 0$$

this is equation of SHM

$$\omega^2 = \frac{c}{I}$$

$$\omega = \sqrt{\frac{C}{I}}$$

$$T = \frac{2\pi}{\omega} = 2\pi \sqrt{\frac{I}{C}}$$

$$\text{But } C = \frac{\pi \eta r^4}{2l}$$

$$\therefore T = \sqrt{\frac{2Il}{\pi \eta r^4}} \quad (2\pi) = T^2 = \frac{2Il}{\pi \eta r^4} (4\pi^2)$$

$$\eta = \frac{8\pi Il}{T^2 r^4}$$

$$\text{But } I = \frac{MR^2}{2}$$

$$\eta = \frac{4\pi MR^2 l}{T^2 r^4}$$

From above equation η can be calculated the value of η of wire AB should be measured accurately because in the equation it occurs in fourth power of η of the experimental wire.

SPECIAL THEORY OF RELATIVITY

Einstein in 1905 proposed the special theory of relativity.

Loorentz - Fitzgerald length contraction:-

Let S & S' be the two frames of reference at an instant $t=0$, origins are considered. Now the frame S' is moving with a velocity ' v ' along the $+x$ -axis with respect to S . Let a rod of length AB is rest at S' .

Let x'_1 & x'_2 are the ends of the co-ordinates at the rod AB as measured by the observer in frame S' then length $l_0 = x'_2 - x'_1$, it is known as proper length.

Let x_1 & x_2 are the end co-ordinates to the rod ' AB ' as measured by the observer in frame S then length.

$$l = x_2 - x_1$$

According to Lorentz transformation equation.

$$x'_1 = \frac{x_1 - vt}{\sqrt{1 - \frac{v^2}{c^2}}}$$

$$x'_2 = \frac{x_2 - vt}{\sqrt{1 - \frac{v^2}{c^2}}}$$

$$l_0 = x'_2 - x'_1$$

$$l_0 = \frac{x_2 - vt}{\sqrt{1 - \frac{v^2}{c^2}}} - \frac{x_1 - vt}{\sqrt{1 - \frac{v^2}{c^2}}}$$

$$l_0 = x'_2 - x'_1$$
$$l = x_2 - x_1$$

$$l_0 = \frac{x_2 - x_1}{\sqrt{1 - \frac{v^2}{c^2}}}$$

$$l_0 = \frac{l}{\sqrt{1 - \frac{v^2}{c^2}}}$$

$$l = l_0 \sqrt{1 - \frac{v^2}{c^2}}$$

$$l_0 = l \gamma$$

$$\gamma = \frac{1}{\sqrt{1 - \frac{v^2}{c^2}}}$$

from the above equation, relative length will than.

proper length w.r.t the relative velocity.

$$l < l_0$$
